Portfolio: husseinadeiza.github.io/web3alphatester/

Remote-ready, any time zone. Available immediately, 20 or more hours per week.

PROFESSIONAL SUMMARY

Detail-driven data annotator with three years of paid AI training data work across text annotation, data labeling (labelling), image labeling, audio transcription, and reinforcement learning from human feedback. Trained and evaluated large language models across ten or more domain areas including healthcare, public health, legal, finance, and science, building datasets where label correctness directly determined model performance. Licensed Environmental Health Officer with the Environmental Health Council of Nigeria (EHCON), providing rare subject-matter depth for medical, public health, and safety-critical annotation. Recipient of the Adaption Labs AI Research Grant, inaugural cohort. Near-zero error rate across thousands of annotated government and public health records. Working language English (advanced, professional written); Arabic at beginner level.

Key metrics: 3 years annotation and RLHF experience | 20 fine tuned model submissions at a 79 percent general win rate | 21 domain knowledge assessment modules passed | 30 or more facilities' health data managed with zero audit findings | 55+ words per minute at 98 percent accuracy

ANNOTATION AND DATA SKILLS

- **Text annotation and labeling** — text classification, intent and entity tagging, named entity recognition (NER), topic categorisation, sentiment tagging, claim tagging, prompt and response writing (SFT)
- **RLHF and human feedback** — response rating, preference ranking, pairwise comparison, rubric creation, rubric grading, red teaming, hallucination detection, fact checking
- **Other modalities** — image labeling and labelling, bounding box and polygon annotation, audio transcription, document data extraction
- **Dataset operations** — training data curation, dataset construction, data cleaning, data validation, source verification, dataset quality assurance
- **Quality assurance** — accuracy auditing, guideline adherence, reproducible documentation, error rate reduction, inter-annotator consistency
- **Tools and languages** — Python, SQL, Microsoft Excel, Google Sheets, Git; English (advanced, professional written), Arabic (beginner)

PROFESSIONAL EXPERIENCE

AI Data Trainer and RLHF Specialist

Self-employed across multiple AI platforms | August 2023 – Present (3 years) | Remote

- Deliver reinforcement learning from human feedback tasks daily, rating, ranking, and comparing language model outputs against detailed written guidelines while maintaining focus through long, detail-heavy, repetitive task runs.
- Build and verify training datasets for machine learning and natural language processing systems across healthcare, legal, finance, and scientific domains, applying written labeling guidelines exactly as specified.
- Perform quality assurance on data inputs and model outputs, reducing error rates to near zero across thousands of annotated government and public health records.
- Complete 20 fine tuned language model submissions for the Adaption Labs AutoScientist Challenge 2026, achieving a 79 percent general win rate.
- Provide compute and inference capacity for AI companies, monitoring model behaviour and reporting anomalies in model responses.
- Document annotation processes and maintain comprehensive project records, ensuring every task is reproducible and reviewable by a second annotator.

Research Grantee
Adaption Labs, AutoScientist Challenge and Research Grant Programme | August 2026 – Present | Contract, Remote

- Selected for the Adaption Labs inaugural AI research grant cohort as an independent, unaffiliated researcher, on the basis of applied findings on data verification and small dataset generalisation in fine tuned language models.
- Conduct applied research on annotation quality, data verification, and dataset generalisation, engaging with grantees and researchers working on adaptive AI systems.

Health Data Management and Monitoring and Evaluation Officer
Abuja Municipal Area Council (AMAC), M&E Department | January 2026 – September 2026 | Abuja, FCT, Nigeria

- Managed and validated health datasets for 30 or more primary healthcare facilities, applying strict data entry standards to WHO and UNICEF supported reporting requirements with zero audit findings.
- Conducted data quality assurance and routine validation checks across the facility network, identifying and resolving inconsistencies in health information records.
- Facilitated capacity building sessions for healthcare staff on data collection, data entry standards, and reporting accuracy.
- Produced monthly, quarterly, and annual reporting datasets for the FCT Department of Health.

Transcription and Content Evaluation
Freelance, multiple platforms | 2023 – Present | Remote

- Transcribe and evaluate audio content in English, applying accuracy standards for verbatim capture, speaker attribution, and terminology consistency.
- Evaluate written and generated content against quality criteria, identifying inconsistencies, unclear instructions, and technical issues and escalating them with supporting evidence.
- Apply detailed annotation and evaluation guidelines to content-moderation and model-training tasks, maintaining consistency across long, detail-heavy task runs.

Environmental Health Officer
Kogi State government health agencies | January 2021 – December 2022 | Kogi State, Nigeria

- Conducted structured field inspections and documented findings to regulatory standards, applying checklist-based assessment methodology later transferred to data annotation guidelines.
- Performed water quality testing and food safety auditing, recording observations precisely against defined criteria.

EDUCATION

Higher National Diploma (HND), Environmental Health Technology
Kogi State College of Health Sciences and Technology, Idah, Nigeria | 2022 – 2024

LICENCE AND CERTIFICATIONS

- Practice Licence, Environmental Health Council of Nigeria (EHCON) — Environmental Health Officer, licence cycle 2026
- NEBOSH International General Certificate (IGC)
- Adaption Labs AI Research Grant Recipient, Inaugural Cohort, 2026
- micro1 AI Interview, Outstanding Performance Certification, September 2026
- micro1 Frontier Engineering Challenge 2026, Certificate of Participation
- Certificate of National Service, National Youth Service Corps, 2026
- COYEC 2026 Delegate, UN Sustainable Development Solutions Network Nigeria, June 2026

ADDITIONAL INFORMATION

- Subject matter knowledge in healthcare, public health, environmental health, water safety, food safety, and sanitation — directly applicable to medical and safety-critical annotation projects.
- Completed 21 domain knowledge assessment modules covering biology, finance, medicine, and computer science for AI training platforms.
- Own Ubuntu Linux computer; comfortable installing applications, following written setup instructions, and documenting steps reproducibly.
